This medicine is suitable for most people but a few people should not use it. If you are in any doubt, talk to your doctor or pharmacist.

**Do not use this medicine…**
- If you have been prescribed by a doctor.
- If you have taken any other painkillers in the last four hours.
- If you have ever had a bad reaction to Migraleve or any of its ingredients.
- If you are taking other medicines containing paracetamol.
- If it is for a child under 10 years of age unless this is under medical supervision.

If any of these apply to you, get advice from a doctor or pharmacist without using Migraleve.

**Talk to your doctor or pharmacist…**
- If you suffer from liver or kidney disease.
- If you are taking any other prescribed medicines.
- If you are taking any other medicines including:
  - metoclopramide or domperidone (used to treat nausea and vomiting;)
  - cimetidine (used to treat high cholesterol;)
  - anticoagulants (drugs that thin the blood, such as warfarin)

If you are not sure about the medicine you are taking, show the bottle or pack to your pharmacist.

**If you are pregnant or breast-feeding**
Ask your doctor or pharmacist for advice before taking this medicine if you are pregnant or breast-feeding.

**Special warnings about drowsiness**
These tablets may cause drowsiness.
If affected, do not drive or operate machinery.
Avoid alcoholic drinks.

**How to take this medicine**

**Children under 10 years**
This medicine is not recommended for children under 10 years old unless this is given under medical supervision.

**Children 10 – 14 years**

Swallow 2 Migraleve Pink tablets at the first sign of a migraine attack.
If the migraine persists, then take 2 Migraleve Yellow tablets 4 hours after the Pink dose and then every 4 hours.

- Do not take more than 8 tablets (2 pink and 6 yellow) in a 24 hour period.
- If symptoms persist for more than 3 days, talk to your doctor.

**If anyone has too much**
Immediate medical advice should be sought in the event of an overdose, even if you feel well, because of the risk of delayed, serious liver damage. Take this leaflet and any remaining tablets with you.

**If you forget to take the medicine**
You should only take this medicine as required following the dosage instructions above carefully. If you forget to take a dose, take the next dose when needed provided that the last dose was taken at least 4 hours ago. Do not take a double dose. Remember that you can only take one Migraleve Pink dose in any 24 hour period.

**Special warnings about addiction**
This medicine contains codeine and can cause addiction if you take it continuously for more than three days. When you stop taking it you may get withdrawal symptoms. You should talk to your doctor or pharmacist if you think you are suffering from withdrawal symptoms.
4 Possible side-effects
Some people may have side-effects when taking this medicine. If you have any unwanted side-effects you should seek advice from your doctor or other healthcare professional. Also you can help to make sure that medicines remain as safe as possible by reporting any unwanted side-effects via the internet at www.yellowcard.gov.uk; alternatively you can call Freephone 0808 100 3362 (available between 10am-2pm Monday - Friday) or fill in a paper form available from your local pharmacy. Migraleve can have side-effects, like all medicines, although these don’t affect everyone and are usually mild.

If you experience any of the following, stop using the medicine and tell your doctor:
- Allergic reactions such as skin rashes, hives or itching, which can occur rarely.

Other effects which may occur include:
- Constipation (although the desire to sleep can be a symptom of migraine).
- Taking a painkiller for headaches too often or for too long can make them worse.

How do I know if I am addicted?
If you take the medicine according to the instructions on the pack it is unlikely that you will become addicted to the medicine. However, the following apply to it is important that you talk to your doctor:
- You need to take the medicine for longer periods of time.
- You need to take more than the recommended dose.
- When you stop taking the medicine you feel unwell but you feel better when you start taking the medicine again.

5 Storing this medicine
There are no special storage instructions for this medicine. Keep the product out of the reach of children. Do not use after the end of the month shown as an expiry date on the packaging. Medicines should not be disposed of via wastewater or household waste. Ask your pharmacist how to dispose of medicines no longer required. These measures will help to protect the environment.

7 Facts about Migraine
What is Migraine?
- Migraine is a common condition, affecting about 10% of the population. It is more common in women than men.
- Migraine consists of a headache, often on one side, accompanied by one or more of the following symptoms:
  - An upset stomach, with nausea (feeling sick) or vomiting (being sick).
  - Sensitivity to light, sound or smells.
  - Visual disturbance such as flashing or flickering lights, blind spots or the inability to focus.
  This invariably occurs before the migraine headache and is known as the aura.
- Symptoms of migraine can last from a few hours to 2-3 days, but an attack is usually over within 24 hours.
- Migraine is a varied condition and can seriously disrupt your life for the duration of the attack. However there is complete freedom from symptoms between attacks.
- The frequency of attacks is very variable, with some sufferers experiencing only one or two attacks each year, whilst others may at times be affected more than once a week.
- Many sufferers can identify factors which trigger or aggravate a migraine attack, such as:
  - Physical (over-exertion, too much or too little sleep).
  - Psychological (anxiety, depression, stress, shock, excitement).
  - Diet (foods such as chocolate, cheese, alcohol, irregular or missed meals).
  - Hormonal/physiological (menstruation, oral contraceptives, menopause, high blood pressure).
  - Other factors (flickering light, bright light/glare, VDU/TV screen, noise, strong smells).
- As soon as you realise a migraine has already started, or is about to start, take Migraleve Pink tablets: if taken early enough they can prevent a migraine attack from developing. Please see section 3 for appropriate dosage.

Migraine in Children
Between the ages of 5 and 15, one child in nine suffers from attacks of migraine which they may describe as a ‘sick headache’. The headache is accompanied by symptoms such as nausea, vomiting, stomach pain or food intolerance. Migraine in children does not differ in any essential way from migraine in adult life but headache symptoms may be less pronounced. Ensure the child does not miss meals or sleep and avoids foods known to trigger an attack.

For further information, consult your doctor or pharmacist.
