Do not use LAMISIL AT 1% Spray.

If you are pregnant ask your doctor before using this

Taking other medicines

Do not apply other medicinal products on the treated areas.

WHAT IS THIS MEDICINE FOR?

LAMISIL AT 1% Spray is an antifungal, and works by

killing the fungi causing your skin problem. LAMISIL AT

1% Spray is used to treat the skin problems caused by

Dhobie itch (tinea cruris): Dhobie itch appears in the groin

and inner thigh area, usually on both sides but often with

one side more than the other, where it can be spread

further between the legs to the buttocks, or up towards

the stomach. Dhobie itch looks like a clearly bordered

rash, which may have blisters.

If you are not sure about the cause of your infection,

the stomach. Dhobie itch looks like a clearly bordered

rash, which may have blisters.

If you are pregnant ask your doctor before using this

LAMISIL AT 1% Spray and children

LAMISIL AT 1% Spray is not recommended for children

under 18 years of age.

Taking other medicines

Do not apply other medicinal products on the treated areas.

HOW SHOULD YOU USE THIS MEDICINE?

LAMISIL AT 1% Spray is for external use only:

• Clean and dry the area to be treated, and wash your hands.

• Remove the cap from the spray bottle and before using

for the first time, press the pump a few times until you

achieve an even spray.

• Spray enough of the solution from a distance of 5 to

10 cm to thoroughly wet the affected skin and

surrounding areas.

• Replace the cap on the spray bottle.

• Wash your hands after touching the infected skin so that

you do not spread the infection on yourself and others.

When used between the toes or buttocks, or on the groin,

the treated area may be covered with a gauze strip,

especially at night. If you do use gauze, use a fresh clean

strip each time.

WHEN TO USE LAMISIL AT 1% SPRAY?

This spray should be applied to the affected areas once

a day, for one week.

You should not stop using the spray before the recom-

mended time as this may allow the infection to return

or reduce the successful cure rate.
LAMISIL AT 1% Spray should start to improve your skin condition in a few days, although full skin healing after the infection has cleared will take longer, up to 4 weeks, because of damage caused during infection.

You should not continue using the spray after the one-week treatment period. Even though you will not be using the spray during the second week, improvement should continue.

If you have not noticed any signs of improvement within 2 weeks of first starting treatment, please see your doctor or pharmacist who will advise you.

TO HELP WITH TREATMENT
Treatment can be helped by keeping the affected area clean by regular washing, and careful drying without rubbing. Scratching the area, although it may be itchy, could cause further damage and slow the healing process or spread the infection.

Because these infections can be passed on to other people, it is helpful to keep your own towel and clothes, which are not shared by others. To protect yourself from re-infection, these should be washed frequently.

WHAT IF YOU ACCIDENTALLY SWALLOW SOME OF THE SPRAY?
If LAMISIL AT 1% Spray is accidentally swallowed, please tell your doctor who will advise you, or go to your nearest Casualty Department.

WHAT IF YOU FORGET TO USE THE SPRAY?
If you forget an application, apply it as soon as possible and then carry on as normal. If you only remember at the time of the next application, just apply that application and then carry on as normal. It is important to try to use the spray at the correct times as missing applications could risk the infection returning.

ARE THERE ANY SIDE EFFECTS?
All medicines can cause problems in some people, and it is important to note the following:

LAMISIL AT 1% Spray can occasionally cause redness, stinging or itching after use. These effects are harmless and usually you can continue with the treatment.

In rare instances people may be allergic to LAMISIL AT 1% Spray which could cause swelling and pain, blistering, skin rash, hives or a worsening of itch. If you experience any of these particular symptoms, stop using the spray and tell your doctor or pharmacist immediately.

If you notice any unusual effects after using the spray, it is important that you tell your doctor or pharmacist.

STORING YOUR MEDICINE
Keep out of reach and sight of children. Keep the spray bottle closed and in the carton. Do not store above 30°C. Do not refrigerate. Do not use or keep this medicine after Use by (EXP) date shown on the box and on the container.
